RESOURCES > LIBRARY > ADDITIONAL RESOURCES

Evaluating Information Resources

- *Scholarly vs Popular --* Scholarly resources are written by experts in the field and supported by research, while popular resources are written for general audiences and usually lack references to support assertions.

- *Refereed (or peer-reviewed) --* Articles are reviewed for credibility and quality by authorities in the field of study before acceptance for publication.

- *Websites --* The domain type may help indicate reliability and accuracy. For example,
  - .edu = academic institution with scholarly information
  - .gov = federal government site
  - .org = nonprofit, may include bias by advocacy groups
  - .com = commercial, may be biased to make sales
